

CAIO LIMA

Senior AI Engineer | Senior Software Engineer

Python | RAG | Vector Database | ML Ops | Gen AI | LangChain | LangGraph | LLM pipeline
Multi Agent architectures | Observability | AWS | GCP | Cloud | Terraform | CI/CD | Tests | API

+55 11 968467467 • caiohandradelima@gmail.com • [LinkedIn](#) • [Portfolio](#) • [São Paulo, Brazil \(GMT-3\)](#)

Summary

Senior Software Engineer for **over 10 years of experience** creating exceptional products inside big companies such as **PayPal, Airbnb, Sephora, Amazon logistics, Itau Unibanco** using tools/languages such as **Python, RAG, Vector Database, ML Ops, Agents architecture development, LLM pipelines, Observability, Lang Smith, Lang Fuse, AWS Cloud, GCP Cloud, MCP, Terraform, CI/CD Pipelines, Tests, Api development, SQL, NOSQL, Data ingestion, ETL and ELT data pipelines, etc.**

Key Achievements

✂ Venmo App Software in USA

Creating an algorithm to deal with **60 billions** in the **Venmo App** from scratch using **Data ingestion oriented to AI** algorithms.

✂ Scaling a bank to 350 engineers

Worked to build one of the largest financial industry teams in Latin America **achieving 350 Software engineers in the same project as DevOps Engineer manager.**

✂ Health Care Software

Created from scratch the **world's first and only eye care app** that provides comprehensive support for treatment in one of the most renowned hospitals in the world.

Experience

Sephora

Senior Full-Stack AI Engineer

- Architecting, developing and deploying a RAG using vector database to build AI agents
- Developing a multi-agent project through LangChain, LangGraph and LangFuse for observability
- Stack: Python | RAG | Vector Database | LangChain | LangGraph | LangFuse | AWS | Terraform | Bash | CI/CD | FastAPI

Remote, USA
01/2026 Present

Borderless Coding

Senior AI Engineer (Contributor-No Full-time job)

- Creating an entire ingestion flow using internal database towards a RAG system
- Chunking info using AI strategies and langchain as framework
- Creating business dashboards using AI analyses, internal data and matching with company needs.
- Stack: Python | RAG | LangChain | AWS | Terraform | Bash | CI/CD

Remote, USA
12/2025 Present

PayPal Venmo App

Senior AI Data Mobile Engineer

- Creating an algorithm to deal with 60 billions of marketing events annually using RxJava and Firebase
- Creating different Marketing strategies to the **Venmo App ecosystem** using strong Data concepts.
- Creating a complex Github Actions to deal with Firebase Remote Config through bash algorithms.
- Stack: Python | Tests | RAG | Data Ingestion Pipeline | Kotlin | Java | Langchain

Remote, USA
04/2024- 01/2026

Eye Care Health

Principal Fullstack Engineer

One of the most renowned hospitals in the world

- Creating from scratch** the world's first and only eye care app that provides comprehensive support for treatment through intricate business connections using Flutter and NEST JS to create API.
- Discussed the project needs from scratch with the Business sector converting to technology algorithms.
- Connecting Doctors with patients through Apps available in Google Play for Android and App Store for iOS devices.
- Stack: Flutter | UI Tests | Unit Tests | Typescript | Nest JS | NoSQL | AWS | Terraform | Python | Data ingestion oriented

Hybrid, Brazil
08/2023 - 04/2024

Total Express

Full Stack Engineer

Amazon logistic in Brazil - allocated by third party consulting

- Increased Amazon's package shipping capacity by 50% developing the new Total Express shipping App using Flutter and NEST JS.
- Backend development using NEST JS (JavaScript/TypeScript), with automated testing through Github Actions.
- Implemented augmented reality improvements for package data management reducing the time for registering package details in the system through Android Native algorithm and Camera usage.
- Stack: Android | Kotlin | Java | Firebase | Flutter | Python | UI Tests | Unit Tests | Typescript | Nest JS | SQL DB | Google Cloud

Remote, Brazil
08/2022 - 09/2023

Master Bank

Tech Lead Engineer

Remote, Brazil
03/2022 - 04/2023

Investment bank in Brazil - allocated by third party consulting

- Created an encryption algorithm using C++ and Kotlin: to securely send data to the server, protecting against interception.
- Prepared the new banking app to support 20k new customers daily implementing a robust development process
- Implemented a process that increased delivery efficiency by 25%: by optimizing modern software development practices
- Stack: Android | Kotlin | Java | Firebase | MVVM | Navigation | Coroutines | Retrofit | UI Tests | Unit Tests

Itau Unibanco

DevOps Engineer Manager | Senior Software Engineer

Remote, Brazil
12/2021 - 03/2022

Largest financial industry in Latin America - allocated by third party consulting

- I got hired to assist build one of the largest instant transfer software (PIX Transfer) throughout the world. At that point, we achieved more than 400 thousand dollars transferring between accounts per day and increasing fast.
- Reduced 20% of average time to make a PIX transfer and increased 14% the amount of transactions through growth process created crossing marketing data and implementing UI improvements applying UX concepts increasing a millions of PIX transfers made per day.
- Stack: Android | Kotlin | Java | Firebase | Python | Retrofit | UI Tests | Unit Tests | API

Globo television

Senior Android Engineer

Remote, Brazil
08/2021 - 01/2022

Largest broadcast television industry in Latin America - allocated by third party consulting

- Worked in a television platform similar to Netflix improving how users may find content to watch.
- Increased engagement time on the platform impacting metrics like LTV (Lifetime Value) using data-driven growth processes creating ADS based on user content preferences while watching different contents.
- Stack: Android | Android Television | Kotlin | Java | Firebase | MVVM | RxJava | Retrofit | UI Tests | Unit Tests

Itau Unibanco

Senior DevOps Engineer Manager

On site, Brazil
12/2018 - 08/2021

Largest financial industry in Latin America - allocated by third party consulting and hired by Itau

- Transformed the Investments feature into the second most accessed one of the year containing a thousand of access every day
- I worked in the most critical team implementing and managing processes to deal with company scalability, starting with 150 Android developers and achieving 350 coding simultaneously. My team was responsible for managing squads, reviewing developers code, evaluating quality, implementing improvement measures, dealing with CI/CD tools and culture, and managing the release process.
- Stack: Android | Kotlin | Java | Python | Bash Script | Gradle | UI Tests | Unit Tests | Jenkins | DevOps

Gizmin Consulting

Software Engineer

Remote, Brazil
01/2017 - 12/2018

Brazil IT Consulting

- Worked on state financial app creating different Android features involving payment and transfer to private finance banks
- Stack: Android | Kotlin | Java | Firebase | Retrofit | Unit Tests

Languages

• Python 5 years • Kotlin 8 years • Typescript 4 years • Dart 4 years • Bash 6 years

Github projects

[Crypto Real-Time Pipeline](#)

Real-time data ingestion and processing pipeline for cryptocurrency market data. Architected for low-latency financial analysis

[NYC Rainy Data Pipeline](#)

End-to-end batch ETL pipeline analyzing historical weather patterns in New York. Leverages modern data tools for robust extraction and storage.

[AI Data Tech Roles Analysis](#)

Data-driven analysis of the AI and Data Engineering job market. Automates collection and visualization to identify emerging market trends.

[Nasa images RestfulAPI](#)

Nest JS project consuming Nasa api to recover satellite imagery. Includes Docker, AWS EC2 deployment, and Clean architecture.

Education

Eniac University

Bachelor's in Software Information

06/2016 - 06/2020
